

RODRIGO BAZAN

INCOMING POWER SYSTEMS PROTECTION ENGINEER AT ITC HOLDINGS CORP.

LINKEDIN.COM/IN/RODRIGO-BAZAN-ARANDA | RODRIGOFBAZAN@GMAIL.COM |

EDUCATION

UNIVERSITY OF FLORIDA

B.S. in Computer Engineering | GPA 3.56

Gainesville, FL

Graduated May 2026

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Digital Design, Microprocessors.

SKILLS

Languages: Python, JavaScript, C/C++, SQL, Java

Tools & Frameworks: React, Node.js, Express.js, MySQL, Git, Excel, Flask, REST APIs, Render

Areas of Interest: Full-Stack Development, Fintech, Product Analytics, Backend Engineering

EXPERIENCE

RELAY DESIGN INTERN

ITC Holdings Corp.

May - Aug 2025

Novi, MI

- Developed a Python-based automation tool to parse and reconcile 1,000+ records across large datasets, enabling rapid detection of discrepancies and supporting data-driven decision-making at scale.
- Collaborated cross-functionally with engineering teams to identify and resolve system logic issues, conducting structured testing and debugging workflows in a high-stakes production environment.

TEST ENGINEERING INTERN

Paradox Security Systems

May - Aug 2024

Fort Lauderdale, FL

- Configured and validated 50+ hardware control panels integrating diverse sensors and actuators, ensuring system reliability across varied product configurations.
- Designed and implemented a supply management system for 200+ products, restructuring inventory data to improve lookup efficiency and reduce operational friction.

TEACHING ASSISTANT

UF Dept. of Engineering Education

Fall 2024 - Spring 2026

Gainesville, FL

- Managed course logistics for 60+ students and led lecture sections covering Arduino, CAD, and circuit fundamentals.

COMMUNITY SERVICE TEAM LEAD

Institute of Electrical & Electronics Engineers, UF Student Branch

Fall 2023 - Spring 2026

Gainesville, FL

- Directed community service operations for 150+ ECE students and led engineering outreach events.

PROJECTS

NBA FAN APP | React, Node.js, MySQL, ESPN API

Spring 2025

- Built a full-stack sports application using React, Node.js, and ESPN APIs to deliver live scores, real-time game feeds, and personalized content across multiple dynamic views.
- Collaborated with a 5-person team using Agile workflows and Git to design and deploy a responsive, engagement-focused UI.

PICKLEBALL TOURNAMENT APP | Flask, Python

Summer 2026

- Designed, built, and deployed a Flask web application supporting a 40+ participant tournament, including registration, draft generation, live scoring, and automated standings updates, delivering a polished end-to-end user experience from any device.
- Delivered a mobile-friendly experience enabling real-time score and standings access from participants' phones.

ATHLETE POSITION TRACKING SYSTEM | ESP32, Python

Spring 2026

- Developed a low-cost player tracking system using ESP32 hardware and trilateration algorithms for real-time positioning on a soccer field, with frontend data visualizations.
